Scalability & Future Plan

Date	15 March 2024
Team ID	Not applicable - individual project
Project Name	Global Fuel Prices and Taxation Trends (2020-2025)
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Dependence on Tableau Public and internet access	Dashboard access may be affected by connectivity or service availability.	Medium
2	Dataset updates may require manual preparation and republishing	New data may not appear until the dataset and dashboard are updated.	Medium
3	Dashboard views are designed for exploratory analysis, not live forecasting	Users should not treat historical comparisons as real-time predictions.	Low

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Public dashboard for individual viewing and sharing.	Keep worksheets focused; simplify heavy views and test access with multiple viewers.
2	Data Storage	CSV dataset used as the analysis source.	Maintain a documented, validated source file; consider a managed database only if data volume grows.
3	Performance	Interactive Tableau views depend on workbook design and browser/network.	Reduce unnecessary marks and filters; test load time and record measured results.
4	Security	Dashboard is published publicly; do not place confidential data in it.	Publish only approved, non-sensitive fields and review sharing settings before updates.

Future Roadmap:

Phase 1	Validate data, labels, filters and public link; add source/method notes.	Before submission	Improve trust and reduce avoidable demo issues.

Phase 2	Improve dashboard navigation and standardise units, titles and filter behaviour.	1-2 months	Make comparisons easier to understand.
Phase 3	Create a repeatable data-quality and refresh checklist; compare selected values with trusted sources.	2-3 months	Improve maintainability and confidence in results.
Phase 4	If data volume or audience grows, assess a managed data source and optimise workbook performance.	Future / as needed	Support larger datasets while keeping the solution manageable.
